Hardware

Arduino is an open-source electronics prototyping platform based on flexible, easy-to-use hardware and software.

Arduino enables artists, designers, hobbyists or anybody interested in creating interactive objects or responsive environments to do so easily.

1. Where is the connection made ?
2. Is it input or output ?
3. What do we do with the connection ?

```
int led = 4;
```

```
int sensor = A0;
```

pinMode ( INPUT )

pinMode ( OUTPUT )

`x = digitalRead( which pin )`

`digitalWrite ( which pin, what signal)`

`x = analogRead (which pin )`

`analogWrite ( which pin, what signal)`

The mechanical size and pin drawing of WS2812B

-4 pins :  
+5V  
GND  
Data In  
Data Out

`leds.begin()`

`leds.setPixelColor( led_no , color)`

`leds.show()`

# Let's get started !
